

Coding & Solution

Date	30 th September 2026
Team ID	SWTID-2026-2214
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/meetuma26-crypto/script-controlled-acl-servicenow
Programming Language(s)	JavaScript, ServiceNow ACL scripting
Framework(s) Used	ServiceNow Platform, ServiceNow Access Control Lists (ACLs)
Key Features Implemented	User and role creation; Institution Details table; Branch-based access control; script-controlled Read ACL; Create, Write, and Delete ACLs; administrator full access; user impersonation for testing.
Pending / Incomplete Features	None for the defined project requirements.
Setup / Run Instructions	1. Log in to the ServiceNow instance with admin access. 2. Create the EEE User. 3. Create roles bb1 , bb2 , bb3 , bb4 and assign them to the user. 4. Create the Institution Details (u_institution_details) table. 5. Add EEE, ECE, and CSE branch records. 6. Create Read, Create, Write, and Delete ACLs. 7. Impersonate users and verify access permissions.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Partial
5	The application runs without critical errors	No
6	Code is committed to a version control repository	No

Additional Notes / Comments:

The project successfully implements role-based and branch-based record security using ServiceNow ACLs. The configured ACLs control Read, Create, Write, and Delete operations, while administrators retain full access. User impersonation is used to verify that access restrictions work as intended.

Note: I marked Version Control Repository = No because your project description does not mention a GitHub/GitLab repository. If you actually uploaded your ServiceNow scripts/configuration to a repository, change this to Yes and add the repository link.
