

Empathy Map

Date	30 th September 2026
Team ID	SWTID-2026-2214
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • “I should only access records that I am authorized to view.” • “Different users should have different access permissions.” • “Sensitive institutional records should be protected from unauthorized users.”	PERSONA NAME (Role / User Type)	THINKS • “How can access to records be controlled based on user roles?” • “Can records be restricted according to the user's branch?” • “How can I prevent unauthorized users from viewing or modifying records?”
DOES • “Logs into the ServiceNow platform. • Accesses the Institution Details table. • Views records according to assigned permissions. • Performs permitted operations such as creating, editing, or deleting records.		FEELS • Concerned about unauthorized access to institutional information. • Needs secure and controlled access to records. • Feels confident when permissions are clearly defined and enforced.
