

Problem-Solution Fit

Date	30 th September 2026
Team ID	SWTID-2026-2214
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS]: ServiceNow System Administrators, IT Security Administrators, and organizations managing student/institution records.	6. CUSTOMER LIMITATIONS EG. BUDGET, DEVICES [CL]: Limited knowledge of ServiceNow ACLs, roles, and scripting. Incorrect configuration can give users unnecessary access or prevent required access.	5. AVAILABLE SOLUTIONS PROS & CONS [AS]: ServiceNow Roles and ACLs: Pros – controls record access and supports Read, Create, Write, and Delete permissions. Cons – requires proper configuration and ACL scripting knowledge.
2. PROBLEMS / PAINS + ITS FREQUENCY [PR]: Unauthorized users may view, create, edit, or delete institution records. This can occur when record access is not properly restricted.	9. PROBLEM ROOT / CAUSE [RC]: Lack of proper role-based and field-based restrictions can allow unauthorized users to access institution records.	7. BEHAVIOR + ITS INTENSITY [BE]: Administrators create users and roles, configure ACLs, and test access by impersonating users. They verify Read, Create, Write, and Delete permissions.
3. TRIGGERS TO ACT [TR]: Need to protect student records, prevent unauthorized access, and restrict records based on the Branch field.	10. YOUR SOLUTION [SL]: Implement script-controlled ACLs to restrict record access based on user roles and the Branch field. EEE users can access EEE records, while administrators retain full	8. CHANNELS OF BEHAVIOR [CH]: ONLINE: ServiceNow Application Navigator, User Administration, System Definition, Access Control (ACL), and Institution Details records.

s4. EMOTIONS BEFORE / AFTER [EM]: Before: Concern about unauthorized access and data security. After: Confidence that records are protected through controlled access.	access. Separate ACLs control Read, Create, Write, and Delete operations.	OFFLINE: Security requirements and organizational access policies.
